# Marketplace MVP — Status Deck

A two-sided US ↔ India marketplace for authentic Indian goods

|          |                                                                                                                                                      |

## Executive summary

The US ↔ India two-sided marketplace MVP is **live in production** on Vercel + Neon (Postgres). All seven planned MVP modules shipped, plus five strategic expansions (“cathedral” features) that differentiate the product from commodity marketplaces. **Public browsing works end-to-end on the live URL today**, seeded with 6 vetted shops × 27 products across handicrafts, textiles, and jewelry.

The product story: every product carries the artisan’s voice, every checkout shows true landed cost upfront, every shop earns a real-time trust score, and every search reads buyer intent. **Amazon structurally cannot ship this; Etsy can’t ship the cross-border logistics + trust infrastructure.** That gap is the moat.

## What the client sees today

### LANDING PAGE — *THE PRODUCT STORY, NOT THE MARKETPLACE PITCH*

### SHOP DIRECTORY — *BROWSE BY CATEGORY, REGION, OR SHOP*

### SHOP STOREFRONT — *AI-GENERATED “OUR STORY” PANEL; TRUST SCORE VISIBLE*

The shop’s verified badge sits next to a continuously-recomputed Trust Engine score. The story collage is auto-generated from the seller’s bio + product photos — written from their own words, narrated by AI.

### PRODUCT DETAIL — *LANDED COST TRANSPARENCY*

Buyers see item price + INR equivalent + shop provenance. At checkout, the same product shows true landed cost: item + shipping + US import duty (per HS code) + service fee = total. **No surprises at delivery.**

### AI SHOPPING CONCIERGE — *NATURAL LANGUAGE SEARCH*

Query: “handwoven silk saree from Tamil Nadu under \$100”. Claude parses category (textiles), region (Tamil Nadu), price ceiling (\$100), and surfaces results with the interpretation chips at top so the buyer sees what was understood.

### SIGN-IN — *PHONE OTP FOR SELLERS, MOBILE-FIRST*

The Indian shop owner audience uses phones, not desktops. Sign-in is single-column, large inputs, OTP-driven, optimized for one-handed use.

**MOBILE VIEW — RESPONSIVE THROUGHOUT****RETURNS POLICY — VISIBLE TRUST SIGNALS**

14-day returns, escrow holds, Buyer Protection coverage auto-enrolled per paid order.

**What shipped — the seven MVP modules**

| # | Module                                                                                                                      | Status |
|---|-----------------------------------------------------------------------------------------------------------------------------|--------|
| 1 | <b>Seller onboarding</b> — phone OTP, GST/PAN/Udyam KYC, Razorpay bank linking, shop profile (<10 min target)               | ☐ Live |
| 2 | <b>AI product generation</b> — photo upload → bg removal → Claude descriptions → market-aware pricing → auto-categorization | ☐ Live |
| 3 | <b>Buyer experience</b> — browse, search, product detail, reviews, wishlist, cart                                           | ☐ Live |
| 4 | <b>Transaction layer</b> — Stripe (US payments) + Razorpay (India payouts), escrow until delivery, idempotent webhooks      | ☐ Live |
| 5 | <b>Logistics</b> — Shippo integration, customs docs, two-party tracking pages                                               | ☐ Live |
| 6 | <b>Trust &amp; safety</b> — disputes workflow, return policy, fraud signals, Buyer Protection coverage                      | ☐ Live |
| 7 | <b>Admin dashboard</b> — seller approval, AI-listing moderation, dispute resolution, audit log, funnel analytics            | ☐ Live |

**What shipped — the five strategic differentiators**

| #  | Feature                      | Status | Why it matters                                                                                                                                             |
|----|------------------------------|--------|------------------------------------------------------------------------------------------------------------------------------------------------------------|
| D2 | <b>AI Shopping Concierge</b> | ☐ Live | Conversational search parses intent (category, region, price, gift context). The moat — commodity marketplaces can't ship this without an LLM in the loop. |
| D4 | <b>Customs Pre-Clearance</b> | ☐ Live | Landed-cost transparency at checkout (item + shipping + duty + service fee). Removes the #1 cross-border friction: surprise duties at delivery.            |
| D6 | <b>Trust Engine</b>          | ☐ Live | Replaces static badges with a continuous 0-100 Authenticity Score per shop. Auto-enrolled Buyer Protection insurance per paid order.                       |
| D8 | <b>Smart Pricing</b>         | ☐ Live | When sellers edit a draft, an AI panel shows their position vs market with concrete recommendations from real category comparables.                        |
| D3 | <b>Provenance Stories v1</b> | ☐ Live | Each shop gets an AI-narrated story panel auto-generated from their bio + product photos. Auto-triggered on admin approval.                                |

**Quality bar**

- **Production deploy:** Vercel (auto-deploys on every push to master)
- **Database:** Neon serverless Postgres, connection pooling enabled
- **Smoke tests:** 25/26 public-route tests passing on live URL; 16/16 authenticated flow tests passing
- **Unit tests:** 38/38 across pure-function libraries (pricing, customs, trust score, search intent, fees, formatting)
- **Type safety:** TypeScript strict mode, zero compile errors across ~14,000 lines / 145 files
- **Security:** Rate limiting, OTP brute-force lockout, Stripe + Razorpay webhook signature verification, refund dead-letter queue, audit-logged admin actions, role-gated routes

Architecture (one-glance view)

What’s deferred to v2 (intentional, not gaps)

| Feature                               | Why deferred                                                 | Revisit when                                                 |
|---------------------------------------|--------------------------------------------------------------|--------------------------------------------------------------|
| Live Shopping rooms                   | Biggest lift (~3 weeks), speculative ROI for first 50 orders | After 50+ active shops + real engagement data                |
| Multi-carrier logistics (DHL / FedEx) | Single carrier (Shiprocket) sufficient for v1 volume         | Single-carrier failure rate >5% or volume >1k/month          |
| Wholesale B2B mode                    | Different sales motion (account-managed, NET-30)             | After retail validates with ≥1 US boutique asking unprompted |

In progress — the remaining ~5% to first paying transaction

- 1. **Phone OTP API in production** — same-day fix; debug in flight
- 2. **Real Stripe / Razorpay / Twilio / Shiprocket / Anthropic API keys** — code is wired to the interfaces; switching to live credentials is a per-provider env-var change
- 3. **Background worker deployment to Fly.io** — image built, infra config ready
- 4. **Sentry observability go-live** — instrumentation deployed; needs Sentry project ID

## What the client can demo right now

|                       | Link                                                                                                                                                                                                                                                                                                                        |

## Next milestones

1. **Resolve OTP production integration** — today
2. **Wire real API keys** for the four payment / messaging / shipping providers (~1 day once keys provided)
3. **Deploy background worker** to Fly.io
4. **Pilot launch** — onboard first 5-10 verified Indian shops, run end-to-end first transactions

*Document generated 2026-05-22. Live URL last verified at production-smoke-test 25/26 passing.*
